**OHSAS 18001 : 2007** Occupational Hazards & Safety Assurance Series  
**ISO 27001 : 2005** Information Security Management System

#### ISO 9001 : 2008 Quality Management System Certification

ISO 9001 is the internationally recognised standard for an organisation's internal Quality Management. The term 'quality' refers to all those features of a product or service which are required by the customer. An organisation's 'Quality Management' refers to an organisation's actions to ensure that its products or services satisfy its customers' quality requirements and complies with any regulations applicable to those products or services.

#### ISO 22000 : 2005 Food Safety Management System Certification

ISO 22000 is an international certification standard that defines the requirements of food safety management systems. It can be used by all organisations, in the supply chain - from farmers to food services, to processing, transportation, storage, retail and packaging. ISO 22000 creates a harmonised safety standard that's accepted the world over. By integrating multiple principals, methodologies and applications, ISO 22000 is easier to understand, apply and recognize. That makes it more efficient and effective as an entry-to-market tool than previous combinations of national standards.

ISO 22000 specifies the requirements for a food safety management system that combines well-recognized key elements to ensure food safety along the food chain, up to the point of final consumption.

#### ISO 14001 : 2004 Environment Management System Certification

ISO 14001 is the internationally recognised standard for the environmental management of businesses. It prescribes controls for those activities that have an effect on the environment. These include the use of natural resources, handling and treatment of waste and energy consumption.

#### OHSAS 18001 : 2007 Occupational Hazards & Safety Assurance Series

With a management system you can better control your company's occupational health and safety risks, improving its performance in the process. An Occupational Health and Safety Management System helps you safeguard your most important assets — your employees.

#### ISO 27001 : 2005 Information Security Management System

The objective of the standard itself is to "provide a model for establishing, implementing, operating, monitoring, reviewing, maintaining, and improving an Information Security Management System". Regarding its adoption, this should be a strategic decision. Further, "The design and implementation of an organization's ISMS is influenced by their needs and objectives, security requirements, the process employed and the size and structure of the organization".
